Ruud silhouette ii troubleshooting manual

We carry over 4 million parts from over 175 major brands, so chances are we have the part you need. SHOP FOR PARTS . 5 Answers SOURCE: Flame sensor needs to be cleaned. Turn off the oven switch or crusher. Pull the flame sensor into the burner section of the oven. It will be easy to find because it has 1 thread running to it. The 40-year-old restaurant and lodge, which is actually located in rural Washington, Va. about a 90-minute drive outside D.C., is the region's first ever three-star restaurant in what is the third guide., Ruud Silhouette II Troubleshooting ManualRuud Silhouette II Oven ManualPull the screw is very careful not to harm anything else. Take the sensor out. Inspect it for cleanliness. Gently clean the sensor with light grade sandpaper. Reinstall the sensor. Restart your oven and this should solve the problem. CookHVACR posted on November 19, 2010. 224 Answers SOURCE: I would look at the heat exchanger. They are designed to flow the heat of burned fuel through them. Cracking or pin holes will leave the super heated air in the oven interior and there you have some about heating protection some look like buttons, older they look like an external thermostat, and these get the hot gas from the burners and then travel then the oven shuts down. When the oven comes back on some times the blower will come right on because the sensor says hey this thing is hot when in fact it isn't. This can also be done and if it is bad enough it will cause carbon monoxide poisoning, please inspect this closely or take a professional look at this. There is no price ever too big to replace a human life. Sorry probably not the answer you wanted, but better safe than sorry! Posted on December 20, 2010.Rob, the blower always blows in the oven so the arrow should always point to the oven. As far as the device does not time again, you have a loss wire. Inspect all the wires and reconnect them after cleaning if they look suspicious. Turn the power to the device prior to this. Your Ruud may have a diagnostic light that can help you fix the oven the next time it doesn't work. Check the wiring diagram that is taped to the back of one of the panels. If it indicates a flashing or flashing light, you may get a starting point where you need to look. February 20, 2010. Bad or dirty flame rod. In the case of a heat call, the 24 volt thermostat sends a signal to the control module. The control module indicates a call to heat with a light on the control that flashes or remains solid, depending on the model. The inductor (exhaust) blower purifies all gasses from the oven and puts a pressure switch under pressure. Once the pressure switch tells the module to continue, the electronic ignition will activate and 120 volts to the Send. The detonator will glow and you will be able to see it as viewed by the small inspection gate. As soon as the detonator gets hot enough, it sends a signal to the module opening module opening throttle (24 volts). Either a pilot will come or the burner tube will ignite then spread the flame to all burners. Finally, a safety sensor will look for a certain temperature within a few seconds and the oven will continue to work and the room air blower will turn on in a minute or two. What could go wrong? Overview of Silhouette II The Ruud Silhouette II is a discontinued upflow gas oven with an efficiency of up to 78.7% AFUE. The Silhouette II includes models that start with UGPH and UGLH. The low-profile, 34-inch design made the device lighter and easier to handle, and left room for optional equipment. The patented Turborex heat exchanger is made of corrosion-resistant stainless and aluminized steel. It featured a multi-speed blower engine and insulated blower compartment, and the design inducer engine was designed for better noise reduction. The device had a permanently washable filter with improved filter access and removal. Yamaha snowmobile service manual mountain max 500. September 27, 2013. I found this model #XXXXX a unit of the gas line running in, but it's not. I have the manual, but of course it just says, remove blower.. I have a RUUD Silhouette II UGPH-10EAMER Cycle: Call for heat Vent Fan comes in at 30 sec or so sparks the detonator good spark) 5 sec if the throttle opens the detonator stops no flame detected so throttle closes house fan comes to my question is, there is a way of adjusting the timing of the detonator so it is While the throttle is open? If no adjustment is possible, should I replace the detonator or board? Thank you in advance Brian Thank you for providing the model and serial number of your oven and a good description of the operation of the oven. Why more people don't do that is a mystery to me --- it's essential to provide meaningful help. The spark should be on and the throttle should open, and the oven burners should be light from the spark. If the burners are light, the flames should be detected by the flame sensor, a small rod that pokes into the burner flames with a single thin wire that goes back to the ignition control circuit board. If the flame is detected properly, the burners will continue to burn.. Ruud silhouette II gas oven control manual, RUUD SILHOUETTE II PLUS 2 LXE GAS Every feature on the RUUD Silhouette II Plus 2 LXE Gas Furnace is designed with reliability and hassle-free Ruud Silhouette II Gas Oven Manual Book: Silhouette: Silhouette ii is a compact two-stage FORM NO. If you look and see how many flashes the LED flashes I will try to help you determine what cause might be if you want to solve it I don't smell gas coming Your oven must give you an error code by an LED on the control board in blower compartment. Should there be some gas that needs to ignite or is there a safety mechanism that turns off the gas because the power goes through the detonator bar? Are you referring to the air purifier on the right in this photo? The detonator will glow a bright orange to reach 360 degrees to light the pilot. Safety will not allow throttle to open until detonator reaches 360 degrees I noticed that the blower kicks on even when the gas is not ignited. I'd think there's a thermostat in there that would see if it's hot enough to start the blower. The control plate is going to be in the panel that is not removed in your photo, it is mounted on the blower casing. The LED should be attached to a control panel to the blower casing, you need to remove panel where blower is and hold or tape the doorknob closed. The control board automatically tells the blower to turn on when there is an ignition error. Hey guys, I have a Ruud oven that doesn't light. The detonator doesn't glow, so I know this is part of the problem. I replaced the ignitor 2 years ago, so I don't know why this would be faulty. However, there is another problem, there is no sound of forced gas coming from the outlets like there used to be. I used to come up here the oven and then I heard the gas coming on and then I heard the gas light and the flames would burn and then I would have heat, but that's not happening now. Hello - Have a Ruud Silhouette II gas oven, the model starts with UGLH not UGPH which is all I find on the line, anyway.. Fan will kick on and then I'll click here for the ignitor, but it's not firing, no glow at all. All the ideas we need to check for and also a way to get a manual or part list so we know which parts to get? OK, there are almost a dozen variations of this model based on production date. The differences may be small, but they can be a factor. if it's a newer house the age of the house can tell us what we need to know There's a troubleshooting guide/flow chart in the manual starting on page 36. But based on your description the first thing I would do is remove the HSI (ignitor) and check for any flaws/flaws... Ruud Silhouette 2 gas oven troubleshooting Fall Furnace Maintenance Guide - The Handyman Family Oven maintenance basics Natural gas heating system service. in this article, in your oven service manual if you find it and posted on your oven. A forced air furnace has four main sections 1 the blower chamber; 2 the. Oven does not start - Clean the Flame Sensor - YouTube January 4, 2012. If you woke up to find out that your gas oven isn't. Rheem/Ruud - Gray Furnaceman Furnacea troubleshoot and Repair Rheem/Ruud gas oven design and troubleshooting When solving problems, you understand that you are working with deadly voltages and a highly flammable gas. If you don't have the ability to perform these operations safely, don't try them. November 22, November Have a RUUD silhouette ii gas oven. It won't ignite. Have a good gas supply to it, the exhaust blower starts, after about 30 sec the throttle clicks and the detonator starts sparking, but read more. || When the tech showed me how to clean the filter, he had all the panels off. I can't figure out how to get the panel out to get to the filter. . Hi; I have a ruud oven (UGPH-05EAUJER) that just keep running. The electronic detonator will begin to spark, and the flame will ignite. This light flashes about once a second while the gas is burning. I have the board with 3 lights and the flame light never turns on during startup. Thanks to Giftfiddler I cleaned the sensor 3 or 4 times and my oven still won't burn. The control board sends acable voltage to the flame sensor that jumps through the flame and through the ground (first burners) as DC returns to the board. It will run well for about 5-7 seconds, then it will go out if the device cut off the gas. It goes immediately after 5-7 seconds when the gas is cut off. I also cleaned all the ad burners checked most of the connections on the circuit board. I have the board with 3 lights and the flame light never turns on during startup. Thanks Giftfiddler Thanks Marty, I read in another thread where you said the reading should be 1.8 microamps or more when the flame is on the rod. question is where do I place the pos. First step would be to stick one lead from meters on the spade connected end of the flame sensor and the other to the ground. I think it's probably a flame sensor problem, but I'm not sure what it's called. I also cleaned all the ad burners checked most of the connections on the circuit board. With a call for heat you need 28-80 volt AC. I have cleaned the sensor 3 or 4 times and my oven still won't keep burning. Actual voltage depends on which control board and I don't know the specific range on yours. To check that the microamps disconnect the wire on the flame sensor and place the meter between the sensor and the wire (set to DC microamps). With most devices and equipment there are only a handful of problems that pop up. Since 1912, we have been learning to recognize the most common problems and their solutions. .
